Getting compile error (NetCDF library) ...

Apr 18, 2008

After I did the latest svn update, I am getting the following compile error, which was not happening this morning.

fortcom: Error: ../core/drv_output_mod.F90, line 58: Error in opening the compiled module file. Check INCLUDE paths. NETCDF

use netcdf

There is no reference to a netcdf directory or library in the compile command. The make file and the drv_output_mod.F90 files have not changed. Any idea what is going on?

That NETCDF hyperlink is supposed to be the word NETCDF in brackets.

I found the problem. misc.h was changed by the update, turning USE_NETCDF on.
